

THE MNO DIRECTORY 2012

4 volume set - Africa & the Middle East - Asia Pacific - The Americas - East & West Europe
Over 3,300 contacts across 803 MNO profiles
Order online at www.MNODirectory.com

Profiles contain company contact information, ownership and network technology information, subscriber data and management contacts. It is not always possible to provide 100% complete profiles. All data, including subscriber data is provided on a where possible basis and is provided to assist in building a profile of each MNO. Subscriber data is as at Q2 2011. For coverage please see information for each regional volume.

Contact info: Main telephone number(s), fax number, address and brand URL. Where a main telephone number is not available and the company has not offered one, we have listed a customer service number or similar rather than no number. In some instances this is in fact a main number too.

Ownership: Name of parent company and URL.

Network tech: GSM/CDMA/iDEN, GPRS, EDGE, 3G and 4G (LTE and WiMAX). The directory contains a lot of network technology information including HSDPA, HSUPD and HSPA+. Please note the directory does not provide a definitive listing of all active operators for each technology, the directory does not aim to list networks in trial status phases.

Management Contacts

The MNO Directory 2012 contains over 3,300 named management contacts. These people are selected from the MNOs' senior management teams and feature job titles such as President, CEO, CFO, CTO, CCO, CMO, Executive and Senior Vice Presidents plus other senior positions. It is not feasible to provide direct email or telephone numbers for these people so you will not find these within the directory. We aim not to list the same person twice, even though they may manage multiple MNOs across different countries.

Research Process

The MNO Directory 2012 has been researched in house, lead by Mark Thomas, who has lead all of the research for the directory series since 2006. Other in house material has been extracted from Africa & Middle East Telecom week, mainly the subscriber data for this region.

The first stage of each new edition is to verify the list of operators using several telecoms news feeds. For this edition the researchers examined articles from January 2011 to May 2012, adding new operators, removing defunct entries and amending all those noted as changing ownership, names or launching new technology.

The second stage is the main research stage. This means Internet research or contacting the operators directly. Every MNO is examined individually and updated as best possible. The main sources are MNO websites, parent companies, company filings, interim and annual reports, media / press releases, regulator pages and data, other trade media as well as blogs, conference companies and social networking sites. Where the last 3 sources are used the researchers also seek a secondary source to verify against.

During the editing and proofing process the researchers cleanse the data removing obvious errors and enrich where possible. Blycroft does not accept liability for any losses resulting from purchasing or using this directory and notes that accuracy of information within the directory is based upon information presented by the operators themselves.
